Foreword

Kivells are delighted to have received instructions from Messrs HO Champneys Ltd of Old Farm, Tunbridge Wells, Kent to disperse their super Dairy herd which is being removed to Exeter Livestock Centre for convenience of Sale.

The herd here at “Old Farm” can be traced back to the original 14 cows bought in 1946 by Henry Owen Champneys. Over the years the family dairy business grew under the stewardship of the Late Adam Champneys, and his Daughter-in-law Mary. The focus of this closed herd has been to breed functional cows with good legs and feet, correct udders, fertility, longevity and positive fat and protein. A good all round cow.

The decision to cease milk production has come about after the herdsman of 32 years Mark Spicer, moves to a much well deserved “less physical” job and the family would like to thank him for his invaluable support through the years. Mary has since decided that this is therefore also the right time to retire from the milking side of the business and with no successional members of family wishing to take on the daily milking routine, the milking herd would be sold, with Mary continuing to raise the followers and calves.

Management and Feeding

Cow Health and Welfare are at the heart of the business. There are routine visits from the vet once AI starts and monthly foot trimming visits.

The cows are fed a TMR ration of grass silage, maize, gp mineral, galaxy and straw. With concentrates fed in parlour and optional outer parlour to yield.

The cows are grazed as soon as it comes dry usually from a round April and will stay out as long as conditions allow last year till November. Kingshay costings show a yearly average of 40% total yield from forage.

DIY AI is used for our mostly Autumn block calving herd fitting in with the dry summers here in the Southeast. Selected cows and heifers are served with sexed Holstein Friesian semen. The remainder with British Blue, Simmental, the odd Hereford and Aberdeen Angus registered sires all chosen for being easy calving and the additional premium price paid for the calves.

Herd Age

There are 19 milking heifers, 17 second, 18 third, 7 forth, 8 fith plus calvers which demonstrates the longevity of the herd.

Calving Pattern

The Herd is all year round calving with the following pattern:

October-November (19), December-January (18), february-April (9),
July-September (15), October (6)

Herd Average

The current NMR Herd Lactation average is

8459kgs 4.25%BF 3.31%PTN

the average cell count for the cows in the sale is cc61

Herd Health

The closed herd is not vaccinated. There is an Action Johne's Plan in place with current whole herd testing quarterly by individual milk ELISA testing. The herd is BVD free and continues annual testing. Selective Dry cow therapy is used and all cows are treated with Orbeseal or Ceparvin and Orbeseal.

Auctioneers Comment

This is as super herd of Cows which have been managed on a relatively simple system. The Cows are medium sized and well balanced with tidy udders, legs & feet. There has been some use of British Friesian genetics over the years which has resulted in very robust and powerful cows. We highly recommend attendance to this very genuine dispersal sale.
