## **FOREWORD**

Kivells are delighted to have received instructions from Ben & Jackie Bailey to disperse their closed, homebred and NMR-recorded herd of Holstein Friesian dairy cattle, as they retire from dairy farming after almost four decades. The herd will be removed to Holsworthy Livestock Market for convenience of sale on Wednesday 9th September 2026.

The Bailey Family established the herd in 1989 with a clear vision of breeding functional, long-lasting dairy cows capable of producing high-quality milk from a straightforward grazing-based system. Through years of careful breeding, sound management and attention to detail, they have developed a herd that combines production, longevity and excellent functional type.

The herd has remained closed for over 20 years and the very best Semex genetics have been used across the herd, producing medium-sized, well-balanced cows with exceptional udders, legs and feet, and the ability to produce high butterfat and protein percentages while maintaining longevity and fertility, a main aim of the breeding policy has been enhancing PLI with herds current average at an impressive 306.

The cows are milked twice daily through a herringbone parlour and are cubicle housed during the winter months. From April through to October, they graze day and night, receiving concentrates through the parlour according to yield. During the winter they are fed grass and maize silage via ring feeders, with no total mixed ration (TMR).

Replacement heifers are all homebred from the very best cow families, ensuring the consistency and quality of the herd has been maintained from one generation to the next. The herd is NMR milk recorded and has consistently produced milk with excellent constituents.

The herd is vaccinated for Bluetongue (April 2026) and has had an annual antibody screen for BVD as well as having all calves tag and tested negative. The herd is monitored clear of IBR and Lepto. The entire herd is Johne's screened, with every cow offered for sale having tested negative. A regular vet visit has maintained good herd health and seen strict biosecurity measures put in place.

**NMR Annual Herd Average:**  
**9693Kgs 4.82%BF 3.56%PTN cc129**  
**Calving interval 370 days**

The sale comprises **22** first calvers, **26** second calvers, **15** third calvers, **16** fourth calvers and **21** fifth plus calvers. **PLUS** 24 In Calf Heifers due October-April.

**Calving Pattern:**

The herd has an all-year-round calving pattern with the following breakdown:

| <u>Calved</u> |    | <u>Due</u> |    |
|---------------|----|------------|----|
| May           | 5  | October    | 9  |
| June          | 9  | November   | 13 |
| July          | 5  | December   | 5  |
| August        | 11 | January    | 15 |
|               |    | February   | 7  |
|               |    | March      | 12 |
|               |    | April      | 6  |

**Auctioneer's Comments:**

This dispersal presents an excellent opportunity to purchase genuine, well-bred Holstein Friesian cows and heifers from a closed herd. The cattle are medium-sized, AI-bred and possess the type, longevity and production. Their outstanding udders, strong locomotion and proven performance are a testament to the Bailey family's careful breeding and management over many years. Ben and Jackie have devoted almost 40 years to developing this herd, and the cattle are a true credit to their dedication and stockmanship. Whilst their retirement marks the end of an era, it offers purchasers a rare opportunity to invest in cattle from a genuine, closed herd. Kivells would like to thank Ben and Jackie for their valued instructions and wish them all the best for the future.

*Mark Bromell*

**Comments from Semex:**

Ben and Jackie Bailey have since 1989 developed a homebred herd of Holstein cows that currently rank in the top percent 1% within the UK. This figure is even more remarkable when you consider that they also have extreme longevity within the herd and over 30 cows are fifth lactation or greater. Over the years they have set about breeding a herd of cows that graze from March to November each year and live in an easy feed system with ring feeders and cubicles. Production efficiency and daughter fertility have been key selection traits and currently 60 animals are in the top 1% of cows for PLI in the UK. Maximum use has been made of grazed grass with a low concentrate input and these moderate sized cows with strength will happily perform in any system. The youngstock have been exceptionally cared for by Jackie and this along with the use of high Immunity sires will give you cattle that will go away and thrive in a wide variety of environments. Best wishes for the future.
