FOREWORD

Kivells are delighted to have received instructions on behalf of ER & PA Ward, Tempellow Farm, Liskeard to disperse their Closed, Pedigree, Homebred and NMR Recorded Herd of Holstein Friesian Dairy Cattle. The herd will be removed to Holsworthy Livestock Market for convenience of sale on Wednesday 30th July 2025.

The Tempellow herd was established in 1963 by Mr Roy Ward, who began dairy farming with a strong emphasis on cow quality and milk production. In 1985, the running of the farm passed to his son, Philip Ward, who has since continued to build on his father's foundations. Over the years, Philip has shown a genuine enthusiasm for cow management and has taken a careful, considered approach to breeding, resulting in a well-balanced and highly productive herd.

The cows are run on a simple yet effective grass-based system. They are fed to yield both in the parlour and through out-of-parlour feeders, with a simple outside diet consisting of maize, grass silage, and chopped fodder beet offered in ring feeders. No total mixed ration (TMR) is used. The herd is grazed from spring through to the autumn, reflecting a cost-effective and profitable management strategy. Cows are milked twice daily through a herringbone parlour and are cubicle housed. Please note that the milk recordings on previous lactations are not fully accurate. The milk meters were not functioning properly at this time and the cows would have been yielding significantly more than shown. Please note, this does not apply to the cow's current lactations as the milk meters have been replaced.

This is an all-year-round calving herd, with a breeding programme that includes both beef and Holstein Friesian sexed semen to maximise efficiency and calf value. The herd health status is exemplary: All cows are vaccinated for Leptospirosis and bluetongue with the second vaccine administered on 5th May 2025, and the herd is IBR and BVD free. The whole herd has been Johnes screened quarterly for the last 5 years. Selective dry cow is practiced within the herd and approximately 90% of cows receive sealant only. **The whole herd was TB tested on 23rd June 2025, and the farm has proudly maintained a TB-free status for over 15 years.**

As an NMR recorded herd, the cows have been selected to produce high-quality milk from grazed grass, with strong components and good yields. These cows represent the type of medium-sized, efficient, modern dairy animal that performs well on a variety of systems.

NMR Herd Average – 9014Kgs 4.69%BF 3.59%PTN
Average cc of cows in the sale: cc67

Age Profile:

The sale includes **32** first calvers, **30** second calvers, **27** third calvers, **15** fourth calvers and **12** fifth + calvers.

Calving Pattern:

The herd has an all year-round calving pattern with the following breakdown:

<u>Calved</u>		<u>Due</u>	
July	4	August	3
June	10	September	8
May	3	October	9
April	2	November	13
March	4	December	16
		January	9
		February	13
		March	4

Auctioneer's comments:

This is a true dispersal from a closed, well-managed unit. The cows are fertile, productive, and accustomed to a practical simple system making them ideally suited to a range of dairy operations. With the herd's outstanding health, fertility, and performance background, this is an opportunity not to be missed. We strongly recommend your attendance at Holsworthy Livestock Market for this sale.

Kivells

Vet's comments:

It has been my privilege and pleasure to have been Phillip Ward's routine vet over the last 34 years, carrying out fortnightly visits for fertility examinations and any other current problems. This herd has consistently performed well, with mastitis and cell counts well controlled. The herd is Lepto vaccinated and regular monitoring over many years has shown no evidence of BVD, IBR or Neospora. Johnes has also been well managed and is at a low incidence. Youngstock have generally been reared with few problems. I would like to wish Phillip a long, happy and active retirement from dairying.

Richard Hillman MA VetMB, MRCVS

Dairy Consultant Comments:

The performance of the 'Tempellow' herd is outstanding, given the traditional layout of the farm buildings and simplistic feeding approach. In the past 12 months the herd has averaged 9,300kg at a feed rate of 0.39kg/l with milk solids of 4.74% butterfat and 3.59% protein. Grass, maize and fodder beet are layered in ring feeders and concentrates are fed via parlour and out of parlour feeders. The breeding of this herd is very impressive, being within the top 25% for 10 of the top 13 traits in the AHDB Herd Genetic Report. Achieving this level of performance is great credit to Philip and his team. I am confident these cows will make a positive contribution to any herd.
