Foreword

Kivells and Norton & Brooksbank are delighted to have received instructions from William Barnett to disperse the Woodend Dairy Herd and surplus machinery on farm at Wooden Farm, Farmoor, Oxford.

The Barnett family has a long and distinguished history in dairy farming. G A & G B Barnett first commenced milking 60 cows near Coventry in 1960, with the herd expanding steadily to approximately 750 cows by 1996. At that time, the family farming business was divided, with G A Barnett & Sons continuing to milk up to 325 cows at Woodend Farm, Oxford.

Today, the herd comprises approximately 260 milking cows plus followers, with milk supplied under a Waitrose contract.

The herd has been closed for approximately 25 years, with replacements bred within the herd and, latterly, a significant use of sexed semen. Bulls have been carefully selected by Kevin Lane of The Cattle Breeding Consultancy, with a consistent breeding policy aimed at producing a profitable, functional and long lasting dairy cow.

After many successful years, there are a number of reasons behind the decision to bring this chapter of the Barnett family's dairy enterprise to a close. The result is a great opportunity to acquire productive and carefully bred dairy cattle.

The sale also provides an opportunity for the right operator to engage in a joint venture arrangement, with the farm being exceptionally well equipped for modern dairy production. The facilities include modern cubicle housing, a 24:24 herringbone parlour, extensive machinery and a well-developed network of tracks.

Will Barnett

Management and Feeding

The herd is managed Herringbone Parlour. **The herd is Cubicle Housed.**

Herd Age

There are 50 milking heifers, 70 second, 56 third, 43 fourth, 32 fifth plus calvers which demonstrates the longevity of the herd.

Calving Pattern

The Herd is all year round calving with the following pattern:

May-June (34), July-September (40), October-December (62)
January-March (42), April-May (22).

Herd Average

The current NMR Herd Lactation average is

10,750Kgs 3.66%BF 3.49%PTN ccl66

Herd Health

The herd is BVD free and vaccinated for IBR and Lepto. The herd is also Bluetongue vaccinated (15th June). All cows are screened negative for Johnes and the herd is quarterly tested.

Breeding Policy for Woodend Dairy

I was called in by Will about ten years ago to address the breeding issue at the farm and to put in a structured plan to breed a strong, milky cow with good functional type and good feet and legs in particular, which were an area of concern. Before I arrived the herd was a mixture of Canadian type Holsteins with some New Zealand and cross-bred genetics.

By using a number of proven, reliable bulls in the first instance we started to get to the type of cow that was required, and more latterly some strong genomic sires have been used. The introduction of genetic testing helped identify superior heifers, and to help control inbreeding a number of red and white Holstein bulls have been used.

Currently the youngstock overall average £284 £PLI (£312 for the yearlings), which puts them in the top 30% of all herds in the country and £109 HealthyCow which is in the top 5%. Health traits are individually very highly ranked with lifespan in the top 30%, SCC in the top 15%, fertility in the top 20% and mastitis resistance in the top 10%.

Current NMR figures at the July recording give the milk yields as 10,872kg of milk per cows per year on 286 head with a 305 day yield of 9,166kg and 773kg of fat and protein, with protein at 3.49% and an SCC of 158.
